SUMMARY

Full-stack engineer with 13 years shipping web platforms end to end, from architecture and **CI/CD** through production. **React**, **Next.js** and **TypeScript** on the front, **Python**/FastAPI, **PHP** and **Node.js** behind them, with the wins measured rather than asserted: page loads cut from 6–8 s to 1–2 s on a global investment bank's corporate platform, deployments from 3–4 h to 30–45 min, and 1.8× throughput from a Redis caching layer on a high-traffic regulated platform. I have worked where correctness matters, privacy-compliance tooling at Meta under GDPR and CCPA and a HIPAA-governed platform for the US National Institutes of Health, and I have led a team of six and built CI/CD from scratch across 10+ projects. I run **Claude Code** as my daily development driver, directing it through structured specs and reviewing every generated change before merge, and I have built two Model Context Protocol servers of my own. English at C1, German at B1 and studying toward B2.

PROFESSIONAL EXPERIENCE

Senior Consultant, BizIntelligence Technologies — *part-time, M.Tech now completed* 03/2024 – present · remote

- Architected and operate a client-side certificate authentication service end to end, **FastAPI** backend with a **React Native** client, replacing password and OTP flows with cryptographic identity verification, directing **Claude Code** through structured specs for the bulk of the implementation and reviewing every generated change before merge.
- Built an encrypted personal data vault where encryption and key handling run entirely client-side, so plaintext never reaches the server.
- Led the migration of a legacy **PHP** application with 200+ modules to a current major version, rebuilding deprecated business-rule and integration layers rather than porting them; flagged the budget risk at the outset and the client shelved the project at roughly 60% completion on those grounds.

Parental Leave 11/2023 – 02/2024

Full-Stack Engineer, Meta — *contract via Alpha Net Solutions* 03/2023 – 10/2023 · Singapore

- Shipped and modernised privacy-compliance tooling used across Meta's global privacy infrastructure (**React**, **TypeScript**, Hack), supporting GDPR and CCPA adherence.
- Owned features end to end with product and compliance stakeholders, merging 90+ pull requests across bug fixes, performance work, and migrations of legacy tools to current engineering standards.
- Optimised report-generation systems, improving processing speed and reliability for compliance workflows.

Software Engineer, Crédit Agricole CIB — *contract via Adecco* 05/2022 – 03/2023 · Singapore

- Rebuilt the corporate platform (ca-cib.com) for a global corporate and investment bank as a headless backend serving content APIs to a **Next.js** frontend, cutting page load times from 6–8 s to 1–2 s.
- Automated the deployment pipeline with **Jenkins (CI/CD)**, reducing deployments from 3–4 h to 30–45 min and downtime from 1 h to 5 min.
- Maintained the organisation-wide intranet portal serving personalised content and data to staff.

Lead Engineer, QBurst Technologies 08/2020 – 05/2022 · India

- Led a scalable multi-site platform for the US National Institutes of Health meeting **HIPAA** requirements, owning architecture, relational data modelling, automated deployments, and production operability.
- Delivered a counter-terrorism portal for the Inter-Parliamentary Union: a headless backend with a **React progressive web app** and custom geopolitical maps.
- Established CI/CD infrastructure and shared developer tooling from scratch across 10+ projects deploying to **AWS**; managed and mentored a team of 6 engineers, running technical interviews, estimation, and code review.

Senior Analyst, Accenture 01/2018 – 08/2020 · Singapore

- Led the Singapore Pools platform rebuild and its integrations with surrounding services and backend infrastructure, modernising a high-traffic, tightly regulated platform and removing expensive third-party licensing costs.
- Designed the **Redis** caching layer that cut expensive repeated **SQL** queries across those integrations and improved performance 1.8×, with invalidation built so the platform never served stale availability data.
- Built an internal dashboard showing live service status and availability for client demos (**React** frontend, **Node.js** backend); consulted on site for Telekom Malaysia and mentored junior developers.

Software Engineer & Technical Lead, Axelerant · Zyxware · Hello Infinity (co-founder) 06/2012 – 09/2017 · India

- Delivered 15+ web projects (e-commerce, multilingual) leading teams of up to 5; co-founded Hello Infinity, owning technology decisions, infrastructure, and client relationships.

EDUCATION

- M.Tech, Software Engineering**, BITS Pilani (work-integrated) 2024 – 2026
- CGPA 8.22/10. Dissertation: “Road Quality Assessment System Using Computer Vision and GPS-Based Mapping” (graded Excellent).
- MicroMasters, Statistics and Data Science**, MITx (MIT, via edX) 2020 – 2022
- Four graduate-level courses across probability, statistics, machine learning, and data analysis, with proctored capstone exams, completed while working full time. Verify credential.
- B.Tech, Computer Science & Engineering**, University of Kerala 2008 – 2012

TECHNICAL SKILLS

Frontend: React, Next.js, TypeScript/JavaScript, progressive web apps, React Native and Expo (cross-platform mobile), responsive UI work, WebSocket real-time sync, push notifications (Firebase Cloud Messaging)

Backend: Python (FastAPI, Flask), PHP (13 years, expert; Symfony and Drupal), Node.js/Express, RESTful and GraphQL API design, headless and decoupled architecture, message-driven and scheduled workflows, SOLID design

Databases & Performance: PostgreSQL, MySQL, relational schema and index design, query optimisation, caching and invalidation strategy (Redis), Apache Solr

DevOps & Cloud: Jenkins, GitHub Actions, CI/CD from scratch, Docker, AWS, NixOS and declarative infrastructure as code, Linux, server administration and performance tuning

Testing & Practice: Jest, Playwright, PHPUnit, Behat, Git, code review, technical leadership and mentoring (teams up to 6)

AI Coding Tools & Agentic Workflows: Claude Code (daily driver), spec-driven prompting, review discipline for AI-generated changes, Model Context Protocol (MCP) server design, LLM APIs

SELECTED PERSONAL PROJECTS

ApplyQuest, github.com/anishanilkumar/applyquest · production 2026

- Full-stack job-search platform (FastAPI, React/TypeScript, PostgreSQL) with analytics, a Firefox extension for one-click job capture, and scheduled email digests, plus an **MCP server** that lets AI agents reconcile tracked applications against a live Gmail inbox.

HeartToHeart, cross-platform real-time messaging 2026

- React Native/Expo mobile client and a Vite/React web client sharing one Node/Express backend, with **WebSocket** real-time sync, Firebase Cloud Messaging push notifications, and a SQL-migration-managed data layer.

Road Quality Map, M.Tech dissertation · roads.anishsheela.com · open source 2025 – 2026

- End-to-end computer-vision pipeline classifying road-surface quality across 808 OpenStreetMap segments, served as quality-aware routing through a Flask API and a Leaflet.js interface. Active learning and a data-driven class consolidation raised validation accuracy from 53% to 79.6% and macro F1 from 57% to 75%.
- Built a gamified annotation platform (annotate.anishsheela.com) producing a consensus-validated dataset of 3,216 images from 53 contributors.

CERTIFICATIONS

Acquia Certified Developer · Google AI for JavaScript Developers with TensorFlow.js

LANGUAGES

English: C1 (IELTS) — full professional proficiency

German: B1 (Goethe-Institut certified), studying toward B2

Other: Malayalam (native), Tamil, Hindi

COMMUNITY & OPEN SOURCE

- Speaking & knowledge sharing:** DrupalCon Vienna 2025, FOSS United IndiaFOSS (“Open Source Handwriting Recognition”), WordCamp Kerala 2024, FOSSMeet 2025; panelist at DrupalCamp Pune.
- Open source:** contributor to Drupal core and maintainer of several open-source projects (drupal.org/u/anisha), including phpresellerclub, a **PHP** API library in continuous use since 2012; localisation contributions to Mozilla Firefox, GNOME, and Wikipedia through Swathantra Malayalam Computing.
- Organising:** co-founder of Drupal Kerala, running meetups and community events and mentoring new contributors.
